

Why Buy Aluminum?

Aluminum has many qualities that prove its superiority. If you have ever had a steel trailer or truck body, you know that steel rusts, warps, and degrades over time. And, you are also aware that the weight of steel will cost more than its worth over time.

Alumne's all-Aluminum products are lighter, stronger, and more durable. They outlast steel by 3-4 times the average life with virtually no maintenance. While Aluminum may be a more substantial initial investment, the longer life-span, savings on maintenance, and reduction in fuel costs will more than offset your costs.

With an unrivalled high strength-to-weight ratio, Aluminum trailers are almost 50% lighter than steel and easier to pull allowing you to increase your gas mileage. Pound for pound, Aluminum is five times stronger than steel. But we didn't leave it at that - we developed custom extrusions throughout the frame and flooring made with specially formulated alloys. The quality of an Alumne product simply can't be beat.
