

LIFTMOORE 72100 CRANE

72,000 FT.-LB. MOMENT RATING
10,000 LB. MAXIMUM CAPACITY

Liftmoore's 72100 is the largest capacity crane we produce. Moment rating of the crane is 72,000 ft.-lbs. with a maximum lifting capacity of 10,000 lbs. at a 7.2 ft load radius.

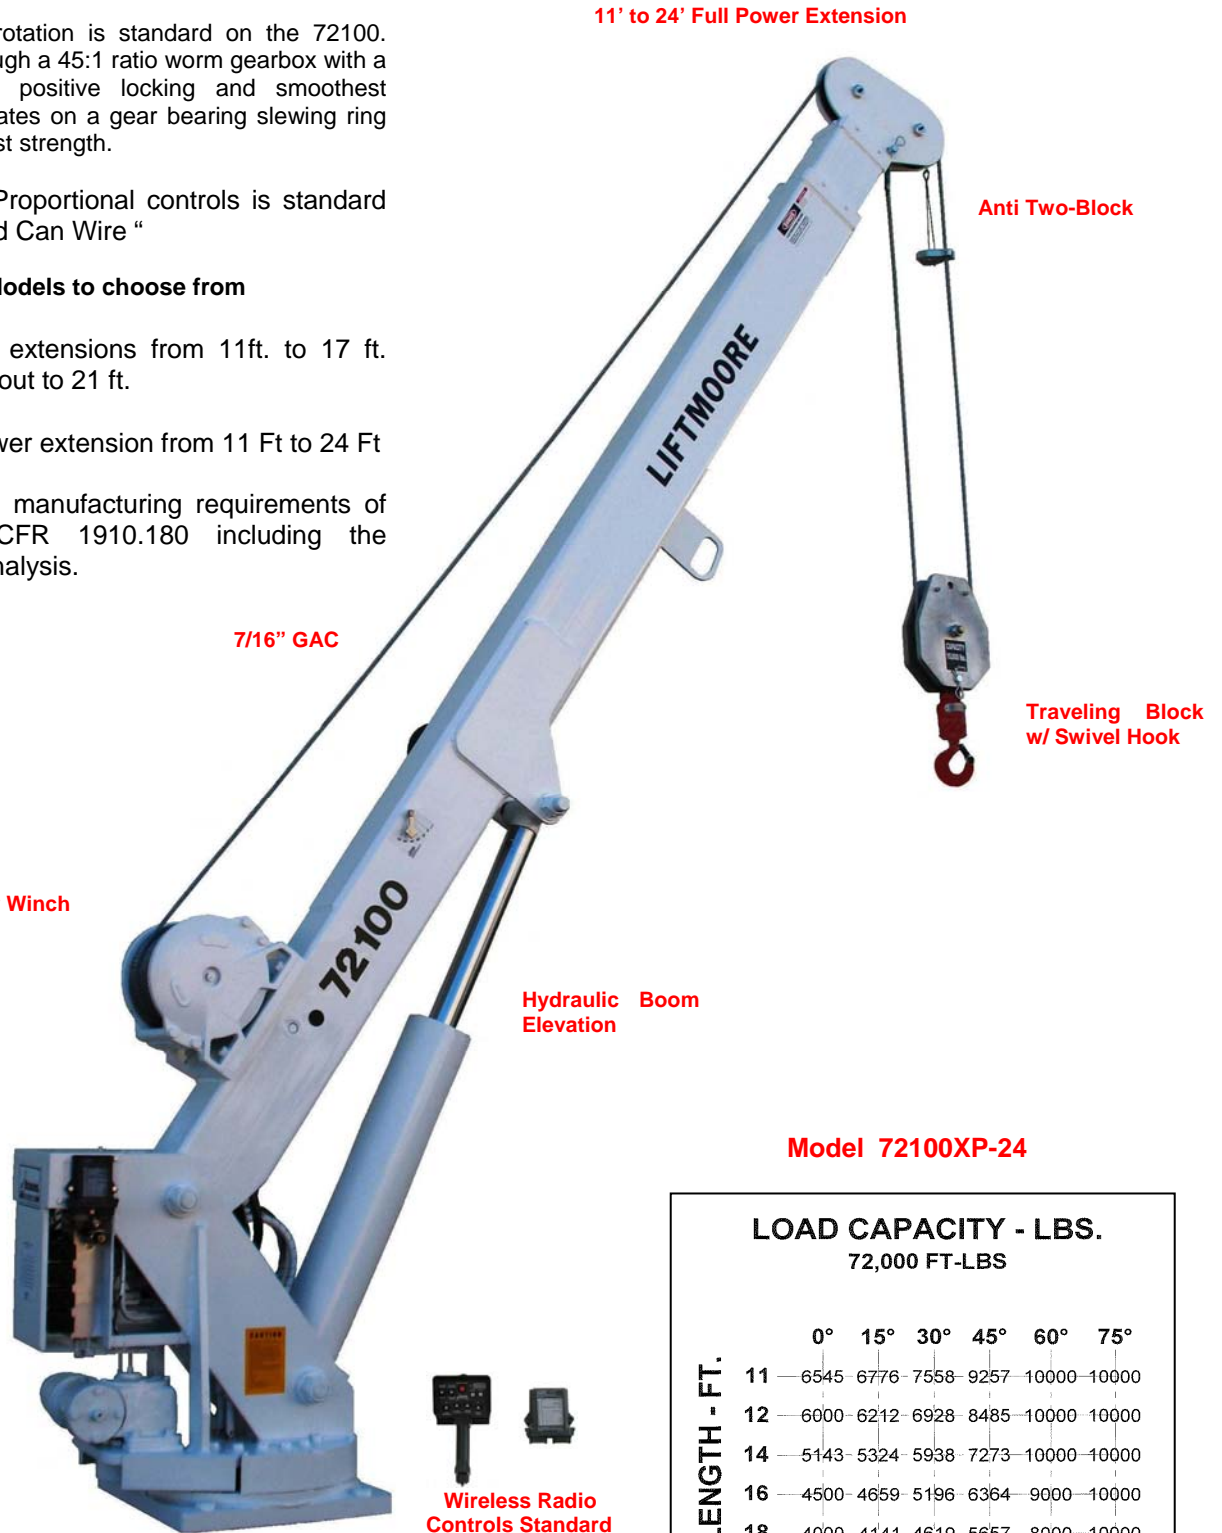

360 degrees unlimited rotation is standard on the 72100. Rotation is powered through a 45:1 ratio worm gearbox with a bronze worm gear for positive locking and smoothest operation. The crane rotates on a gear bearing slewing ring with external teeth for best strength.

Wireless FM Radio Proportional controls is standard complete with "tethered Can Wire "

Two Basic Models to choose from

- **72100XP-21** Power extensions from 11ft. to 17 ft. with a 4-ft manual pull out to 21 ft.
- **72100XP-24** Full Power extension from 11 Ft to 24 Ft

The 72100 meets the manufacturing requirements of OSHA standard 29CFR 1910.180 including the required strain gage analysis.

72100 SPECIFICATIONS

MOMENT RATING:

72,000 Ft.-Lbs.

HOIST WINCH:

A planetary gear drive hoist is included. This is the most efficient method of powering the winch. Single line no load speed of the winch is 35 feet per minute with a 6 GPM flow rate. Winch drum to wire line ratio meets ANSI B30.5 requirements.

10,000 Lbs. @ 7.2 ft **	5,142 Lbs. @ 14 ft. **
7,200 Lbs. @ 10 ft. **	4,000 Lbs. @ 18 ft.
6,000 Lbs. @ 12 ft.	3,000 Lbs. @ 24 ft.

** Two part line required for loads above 5000Lbs.

WIRE ROPE and SHEAVES:

The crane is supplied with 100 Ft. of 7/16 in. galvanized aircraft cable. Minimum breaking strength of the rope is 17,600 lbs. The wire rope is outside of the boom and visible for operators continual inspection. A 5-ton travel block for easy two-part hookup is included. The hook includes an easy turning roller thrust bearing. All sheaves meet ANSI requirements.

BOOM:

The boom angle varies from -5 to +75 Degrees. Both the elevation and extension cylinders include an integrally mounted counterbalance valve for positive load holding. The boom extends on Nylatron slide pads for minimum friction.

72100XP-21: Power extension from 11ft to 17 ft with a manual pull out section to 21 ft.

72100XP-24: Power extension from 11ft to 24 ft with a two stage Hydraulic cylinder.

ROTATION:

A ball bearing slewing ring is used for crane rotation. The ring has an external gear for greatest possible strength. The rotation gearbox is powered by a low speed, high torque hydraulic motor, which drives the 13,000 In-Lb rated bronze worm gear box providing a smooth, safe rotation mechanism. The gearbox uses roller bearings on all shafts for the longest possible trouble free life. The crane rotates continuously and with out restriction

RADIO REMOTE CONTROL:

FM radio remote control is standard equipment on the 72100. This digital control includes the proportional controller for hydraulic flow and monitors the load sensor & anti two-block systems. Includes a system to reduce boom "bounce" during boom down operation. No mechanical relays are used with this control system. A battery charger is included.

HYDRAULIC SYSTEM:

Proportional hydraulic control is standard on the 72100. The system provides variable speed control of all crane functions with the remote control. For smooth operation and minimum heat buildup a pressure compensated flow control system is used. A parallel control circuit is used so that more than one function will operate simultaneously until maximum pressure is reached.

POWER SOURCE:

The crane requires both Hydraulic and 12 VDC electric power. Hydraulic flow and pressure requirements are 6 GPM and 2750 PSI. An on-off switch, fuse and 25 ft of 10 gauge wire are supplied for standard truck installation.

ENGINE CONTROLS (OPTIONAL):

Engine start, stop and speed control can be included with the remote control. A separate receiver is used in conjunction with the FM controls so that unrestricted rotation is maintained. Truck must be equipped for remote operation

LOAD SENSOR

A load-limiting sensor is installed in the elevation cylinder. This sensor will shut down hoist up, boom out & boom down when an overload is detected. The sensor will rest after the load is lowered.

ANTI TWO-BLOCK:

The anti two-block is standard on this crane & prevents extending the boom against the travel block with possible breakage of the cable

MOUNTING:

It is recommended that this unit be mounted on a 30,000-Lb or larger GVWR chassis. Four 1-1/4" Grade 8 bolts are required. Bolts are not furnished. The crane mounts on a 21" square base plate with a 15.5 in. X 18.5 in. bolt pattern.

ACCESSORIES:

An outrigger is needed for stability requirements of OSHA 1910.180. A boom rest is also required. Liftmoore offers both as options.
